

Hans J. Koslowski

Dictionary of Man-Made Fibers

Deutscher Fachverlag GmbH
2nd edition, 279 pages, hardcover
ISBN 978-3-86641-163-0
€ 98,00 (D) | € 100,80 (A) | CHF 129,00

The first edition of the Dictionary of Man-Made Fibers was published in 1998. This up-dated English edition is based on the 12th German edition 2008 of the fiber dictionary. With over 1.200 terms and more than 1.300 literary references (books and trade journals), the book contains information on the whole spectrum of man-made fibers (including raw materials, basic fiber technology, fiber properties, end-uses, global statistics), and includes new fiber developments (microfibers, lyocell fibers, PLA fibers, elastolefin fibers, nanofibers and technical fiber specialties) and a historic overview of the global fiber industry. The focus of the Dictionary of Man-Made Fibers lies in the technical and commercial aspects of the man-made fiber industry.

The author, Hans-Joachim Koslowski, was editor-in-chief of the technical fiber and textile trade journals at Deutscher Fachverlag, Frankfurt, Germany from 1971-2004. Since 2004 he moved from his position of editor-in-chief to publisher of all textile technical publications of Deutscher Fachverlag.

Target reader:

Decision-makers and all areas of management in chemical fiber production facilities and their suppliers (chemical fiber machinery and accessories manufacturers, dyestuff and auxiliary manufacturers) throughout the world.

The comprehensive edition of the dictionary is also a must for students who are studying textile technology, textile machinery construction and textile design as well as for career changers from other branches who are engaged in textile oriented questions.
